SKILL CAPABILITY SUMMARY:

End-User Support & Troubleshooting

- Diagnose and resolve basic hardware, software, and connectivity issues
- Assist users with troubleshooting application errors and system problems
- Log and track help desk tickets using support documentation and ticketing tools
- Guide users through step-by-step problem-solving procedures and escalate when necessary

Operating Systems & Device Setup

- Install, configure, and support Windows-based and mobile operating systems
- Perform basic system maintenance: updates, backups, disk cleanup, and file management
- Set up printers, scanners, and peripheral devices across networked environments
- Create and manage local user accounts and permissions

Software & Productivity Tools

- Support users with Microsoft Office Suite: Word, Excel, PowerPoint, Outlook
- Apply intermediate functions such as formulas, templates, and mail merge in Office apps
- Automate simple tasks using Visual Basic for Applications (VBA)
- Assist teams in using shared software tools for scheduling and document sharing

Customer Service & Communication

- Communicate clearly and professionally with end-users in person and through help desk systems
- Translate technical information into understandable language for non-technical users
- Practice patience and active listening while supporting frustrated or unfamiliar users
- Document steps taken and maintain organized records of issues and resolutions

Basic Networking & Systems Knowledge

- Understand key networking concepts like IP addressing, cabling, and file sharing
- Identify components of LAN/WAN and assist with basic setup and diagnostics
- Use system tools to explore network connections, troubleshoot connectivity, and test access
- Understand and use common tools like ping, ipconfig, and network sharing settings

Security Awareness

- Recognize common security risks such as phishing and malware
- Promote safe computing practices to peers and users
- Understand the basics of access controls, password security, and data privacy
- Respect ethical boundaries in IT support, including confidentiality and acceptable use

Professionalism & Career Readiness

- Apply foundational IT knowledge from coursework to real-world support tasks
- Show willingness to learn and adapt in a professional team environment
- Collaborate on group projects with attention to deadlines and problem-solving
- Maintain a professional demeanor and customer-first mindset

DETAILED COURSE ATTAINED CAPABILITES:

Visual Basic Programming

- Develop applications using Visual Basic for Windows-based environments
- Design and implement interfaces with event-driven logic
- Debug and troubleshoot Visual Basic code to resolve functional errors
- Automate repetitive tasks with simple scripts and logic structures

---

Survey of IT

- Understand major IT domains, roles, and industry certifications
- Apply foundational IT knowledge across systems, software, and infrastructure
- Evaluate IT trends and their impact on business operations

Introduction to Operating Systems and Networking Technology

- Configure and manage file systems, security settings, and OS utilities
- Support basic networking concepts such as addressing, protocols, and cabling
- Diagnose operating system issues across desktops and mobile devices
- Understand core components of LANs, WANs, and client-server environments

---

Introduction to Website Technology

- Create basic web pages using HTML and understand web structure
- Use advanced search techniques to locate and filter online information
- Interpret and edit simple source code in a browser-based environment
- Explain key concepts in internet history, architecture, and protocols

Troubleshoot Applications and Hardware

- Assemble and configure desktop and mobile computing hardware
- Install, manage, and troubleshoot software systems and applications
- Perform system optimization, backup, and recovery procedures
- Diagnose and resolve user-reported hardware and connectivity issues

---

Intermediate Office Applications

- Use advanced features in Microsoft Word, Excel, PowerPoint, and Access
- Integrate data and automate tasks across multiple Office applications
- Analyze data sets using formulas, charts, and queries
- Troubleshoot common office productivity issues and provide user support

---

Java Programming

- Build object-oriented applications using core Java concepts
- Apply control structures, classes, and exception handling in code
- Develop Java programs with user interaction
- Troubleshoot logic errors and runtime exceptions in Java projects

---

Network Setup and Configuration

- Entry level configuration of network hardware routers, switches, and access points
- Set up and manage basic LAN/WAN connections and IP addressing schemes
- Troubleshoot connectivity issues and analyze basic network traffic
- Apply network security measures during system configuration

Cyber Ethics in IT

- Follow ethical guidelines when handling user data and systems
- Identify and address issues involving privacy, hacking, and intellectual property
- Communicate IT policies regarding acceptable use and digital conduct
- Evaluate and report ethical concerns in digital work environments

---

Workgroup Productivity Software

- Collaborate on projects using shared digital platforms and productivity tools
- Define problems, collect and analyze data, and present actionable insights
- Manage group tasks and timelines using project planning software
- Facilitate communication and reporting within IT and cross-functional teams

---

Ergonomics and Usability in IT

- Design and recommend ergonomic setups to improve user comfort
- Evaluate interface designs for usability and accessibility
- Conduct basic assessments to improve human-computer interaction
- Suggest hardware and software solutions based on user-centric principles

---

Programming Mobile Applications

- Design mobile applications
- Develop cross-platform programs that function on smartphones and tablets
- Optimize mobile device capabilities and screen sizes
- Test and troubleshoot app functionality in emulated and live environments

Seminar in Emerging Computing and IT

- Track and explain emerging IT trends and technologies
- Evaluate new tools for relevance and integration in business environments
- Adapt quickly to innovations in hardware, software, and cloud solutions
- Share insights and recommendations about future tech adoption strategies

---

Cloud and Virtualization Technology

- Configure and administer virtual machines
- Understand and differentiate cloud service models (IaaS, PaaS, SaaS)
- Monitor and secure cloud-based systems and hybrid infrastructures
- Evaluate and implement virtualization tools for IT solutions

---

Help Desk Support

- Provide technical support and customer service via help desk channels
- Use ticketing systems to log, track, and resolve issues efficiently
- Communicate solutions clearly to both technical and non-technical users
- Apply troubleshooting frameworks to diagnose and solve user problems

---

Programming Office Productivity Applications

- Automate tasks within Microsoft Office using Visual Basic for Applications (VBA)
- Customize Excel, Word, and Access functionality for user-specific workflows
- Debug and maintain macros for recurring business processes
- Increase productivity by scripting complex tasks across Office Suite

Social Media Security

- Identify and mitigate social media–related security risks
- Advise users and businesses on privacy, ethics, and digital presence
- Monitor and secure corporate social platforms against unauthorized access
- Promote best practices for safe online engagement and content sharing
